

Temple Bar Investment Trust

Investment companies | Update | 23 April 2021

Just getting started

RWC Partners took on responsibility for Temple Bar Investment Trust (TMPL) on 1 November 2020, and its appointment has coincided with a remarkable improvement in the fortunes of this UK equity income trust. Dramatic outperformance, a narrowing of the discount and a buzz around the resurgence of value investing mean that RWC has got off to a great start.

However, the managers think that this is just the beginning of TMPL's turnaround. They note that value-style investing often outperforms for an extended period following a shock to markets such as the one inflicted by COVID-19. Although the news is better, the easing of lockdowns has only just begun. The considerable economic stimulus being injected by governments offers the possibility of a synchronised global economic recovery. These factors may work in TMPL's favour.

UK equity income and capital growth

TMPL aims to provide growth in income and capital to achieve a long-term total return greater than its benchmark (the FTSE All-Share Index), through investment primarily in UK securities. The company's policy is to invest in a broad spread of securities, with typically the majority of the portfolio selected from the constituents of the FTSE 350 Index.

RWC took on responsibility for the management of TMPL's portfolio with effect from 1 November 2020

Fund profile

TMPL aims to provide growth in income and capital to achieve a long-term total return greater than its benchmark (the FTSE All-Share Index), through investment primarily in UK securities. The company's policy is to invest in a broad spread of securities with typically the majority of the portfolio selected from the constituents of the FTSE 350 Index.

For 18 years, TMPL was managed by Alastair Mundy, who was head of the Value Team at Ninety One UK. He stepped down as manager in April 2020. On 23 September 2020, the board announced that it had selected RWC Partners as TMPL's new investment manager. RWC took on responsibility for the portfolio with effect from 1 November 2020.

RWC Partners

TMPL's AIFM is RWC Partners. RWC was established in 2000 and employs around 155 people, including 57 investment professionals. RWC manages around \$18bn for clients across a range of strategies, from offices in London, Miami and Singapore.

Within RWC Partners, responsibility for managing TMPL's portfolio rests with Nick Purves and Ian Lance (the managers). Nick and Ian each have over 30 years' experience and have worked together for 13 years. The two co-manage over £3bn of assets across a number of income funds.

Nick Purves joined RWC in August 2010 from Schroders where he was a senior portfolio manager with responsibility for both Institutional Specialist Value Funds and the Schroder Income Fund and Income Maximiser Fund, together with Ian Lance. He worked at Schroders for 16 years, having moved from KMPG where he qualified as a chartered accountant.

Ian has 30 years of experience in fund management and started working with Nick at Schroders in 2007 before joining RWC in August 2010. While at Schroders, he was a senior portfolio manager managing the Institutional Specialist Value Funds, the Schroder Income Fund and Income Maximiser Fund, together with Nick. Previously, Ian was the head of European equities and director of research at Citigroup Asset Management and head of global research at Gartmore.

Manager's views

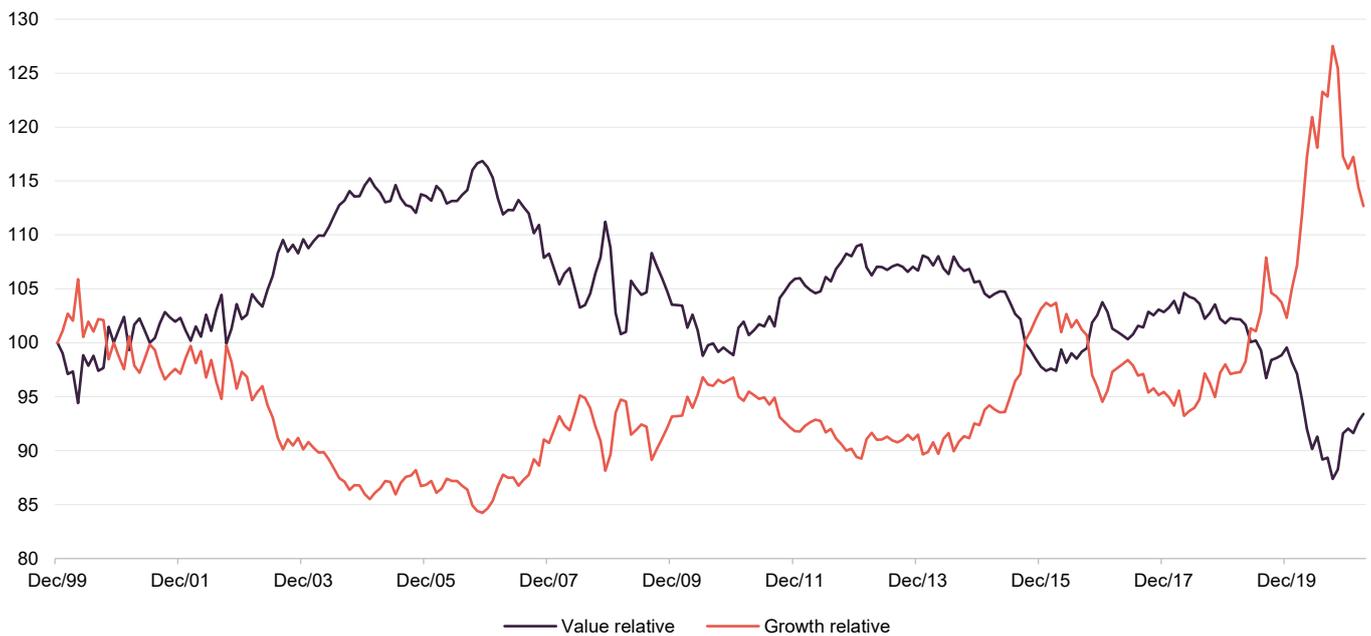

When we published our initiation note last September, whilst the managers were optimistic about the future of the trust, market sentiment appeared to be very much in favour of growth stocks and against the manager's value approach.

The reorganisation of TMPL's portfolio had been completed by the end of the first week in November, just after RWC's formal appointment. The timing could hardly have been more perfect for RWC. Just a few days later, good news began to roll in about the efficacy of a number of COVID-19 vaccines. The effect was to trigger what

Good news on vaccinations was a game-changer for TMPL and value investing

felt like a dramatic rotation from growth to value. However, as Figure 1 shows, there is much ground for the value style to make up just to get back to its relative position ahead of the global financial crisis. RWC feels that the rotation in markets could be only just getting started. The managers note that there is still considerable dispersion in valuations and we have not yet reached a point where a significant proportion of investors are switching exposure towards value stocks.

Figure 1: MSCI UK Value and MSCI UK Growth relative to MSCI UK

Source: Morningstar, Marten & Co

Likewise, although the UK stock market has had a better few months, relative to other leading markets, it is still well behind where it was ahead of the decision to hold the Brexit referendum in 2016. The same is true of sterling.

Figure 2: MSCI UK relative to MSCI World

Source: Morningstar, Marten & Co

Figure 3: Sterling trade-weighted average

Source: Bloomberg

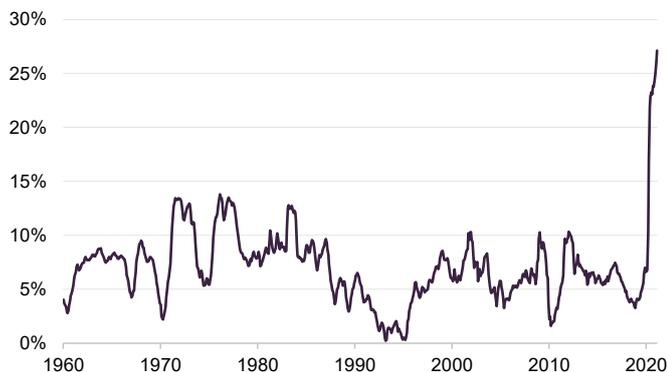

The managers say that value tends to outperform for some time after severe shocks to markets

There is a possibility that 2021 will see a synchronised global economic recovery. If so, earnings revisions could look all the more impressive for coming off last year's lows. Value sectors may see the strongest upward earnings revisions.

The managers' experience with other funds that they manage is that it can take a while for markets to reset themselves after a shock such as the bursting of the tech or financial bubbles. Value tends to outperform for some time after these events. They feel that the pattern will repeat for COVID-19. The managers suggest that, as the value rally continues, not participating in it will become increasingly painful and this should help extend the rally.

Further impetus could be provided by reflation/inflation. In areas such as employment the immediate outlook is deflationary, but as the recovery gathers pace, various bottlenecks in the economy could force prices higher. The managers note that US money supply figures are supportive of inflation. In addition, oil prices are recovering, as are many other commodity prices such as copper (see Figure 5). At the same time, central banks will likely want to keep short-term rates down for fear of choking off the post-COVID recovery.

Figure 4: Year-on-year change in US money supply (M2)

Source: Board of Governors of the Federal Reserve System (US)

Figure 5: Copper price (\$ per lb)

Source: Bloomberg

Banks could see strong dividend growth as restrictions ease

Reflective, perhaps, of rising inflation expectations, yield curves have been steepening. This has been supportive of the financial sector and banks in particular, where higher interest rates should result in higher margins.

Banks also seem to have come through 2020 without seeing a big spike in defaults. If anything, it looks as though loan loss provisions have been too pessimistic. When this is coupled with restrictions on dividends and other forms of capital distribution, many banks' balance sheets now look over-capitalised. This raises the prospect of strong dividend growth in future.

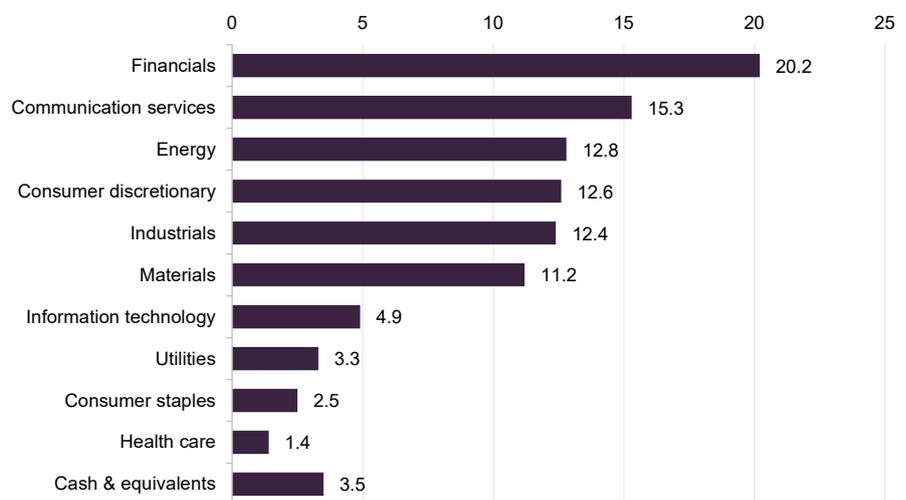

By contrast, the managers note that many so-called defensive stocks actually look quite expensive. They cite the example of Diageo, which is often perceived as defensive and a place to hide in periods of economic uncertainty. However, the managers stress that it is hard to argue that the stock is good value on a p/e of 25x. Anaemic revenue and profit growth (around 2% per annum), vulnerability to competition from craft drinks and start-ups, and stronger sterling reduce the attraction of the stock in RWC's eyes.

Asset allocation

TMPL's portfolio is weighted towards energy, materials and financials and has very little exposure to so-called 'defensive' sectors. That is a stance that has not changed much for RWC's funds over the past year.

The figure for cash and equivalents may include some exposure to gilts. The figure at the end of February was high in advance of the repayment of TMPL's £38m 5.5% debenture stock on 8 March 2021 but by the end of March was down to 3.5%.

Figure 6: Sector analysis as at 31 March 2021

Source: Temple Bar Investment Trust

10-largest equity positions

The list of the 10-largest equity positions as at the end of March is fairly close to the list of the 10-largest holdings provided in Figure 5 of our initiation note using data from six months earlier for a similar fund managed by the team. While the ranking of stocks may have changed and some positions may have been added to on weakness or trimmed on profit-taking, RWC's UK's equity income portfolios have been fairly stable.

Figure 7: Top 10 equity holdings as at 31 March 2021

		Data as at 22 April 2021		
	% of portfolio	Market cap £m	Dividend yield (%)	P/E x
Royal Mail	7.3	4,941	2.0	10.2

	48.0			

Source: Temple Bar Investment Trust, Bloomberg

Figure 8: Royal Mail

Source: Bloomberg

Looking at a few of these:

Royal Mail

18 months ago, there was perhaps a perception that Royal Mail was a poor-quality stock in a declining industry. However, the RWC team is enthused about the prospect for the company's parcel business, which includes GLS, its European parcel delivery division, which handles around 6m parcels per day. What was largely a B2B operation saw sharp growth in its B2C business as home deliveries boomed. The company responded by expanding its sorting capacity by more than 50%. The business's operating leverage is such that much of its sales growth fell through to bottom line. Royal Mail thinks GLS's profits could more than double over the next four-to-five years.

Royal Mail's share price more than doubled over the course of 2020, but the managers feel that the stock was very oversold previously and is still attractively valued.

Figure 9: BP

Source: Bloomberg

BP & Shell

The oil majors were hit last year by a slump in the oil price and growing adverse sentiment towards fossil fuels. The managers believe that the penny has dropped for the oil industry and, for the most part, it is now working towards 2050 net zero emissions targets. The European majors have been setting robust emissions targets and have begun to reposition their businesses for a carbon neutral future. Both opex and capex have been cut. They are working around an equilibrium oil price of \$50 - \$60 per barrel.

The managers say that BP is generating about 50 cents per share or 35p of cash flow and is trading on a 12% free cash flow yield. They think demand will decline more slowly than share prices suggest. TMPL also holds Total and Shell, which the managers say have similar stories.

Figure 10: Anglo American

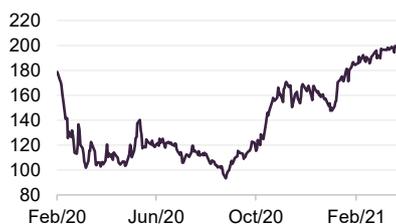

Source: Bloomberg

Figure 11: Marks & Spencer

Source: Bloomberg

Figure 12: NatWest Group

Source: Bloomberg

Figure 13: EasyJet

Source: Bloomberg

Miners

In terms of mining stocks, TMPL has positions in Anglo American (copper, iron ore and diamonds) and two gold miners – Newmont and Barrick. The managers think that a combination of supply-side constraints (after years of cutting back on capex), a resurgent global economy and an increased emphasis on infrastructure investment has created a supportive environment for commodities prices. The industry's capital discipline is much improved, management having learned from the commodities price falls of 2012.

The managers also feel that the ingredients are in place for a higher gold price. We discussed the possibility of higher inflation on page 5. There is also the chance of increased demand for jewellery as consumer confidence returns.

Retail

The arguments against high street retail have been well-rehearsed. COVID lockdown measures accelerated the pace of change. This was true of Marks and Spencer, for example, where the managers reckon three-to-four years' change happened in a few months. The managers highlight that M&S's profits are increasingly derived from its food division. The acquisition of a 50% stake in Ocado was announced in February 2019. M&S replaced Waitrose as the supplier of groceries to Ocado with effect from 1 September 2020.

Other holdings in the sector include Dixons Carphone and Kingfisher. Kingfisher is beneficiary of an uptick in DIY projects during the pandemic, and Dixons did reasonably well as people kitted out home offices.

Banks

In the banking sector, TMPL holds NatWest and Standard Chartered in its top 10 as well as Barclays and Citigroup further down the portfolio. The managers note that even though these stocks have been rising (for the reasons outlined on page 5), they still do not look expensive in their eyes. NatWest is on 0.63x book and Barclays on 0.60x book, according to Bloomberg, for example.

EasyJet

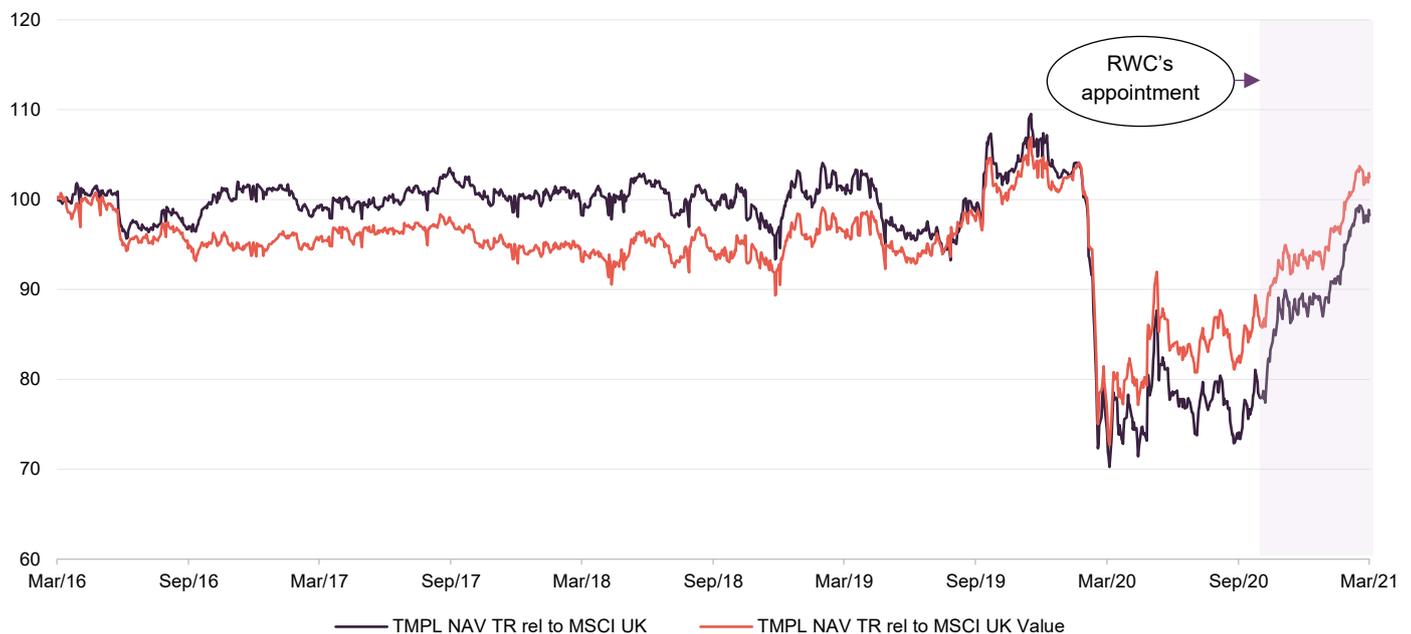

EasyJet was a holding that RWC opted to retain when the managers took on the portfolio, and it has done well since, but lies just outside the list of 10-largest holdings. The company is highly operationally geared and clearly hard-hit by COVID-related travel restrictions. The managers acknowledge that the stock is facing an uncertain future. They feel that the re-rating that has occurred since November may be premature. It is not clear to the team when the company could get back to 2019 levels of profitability. They say that some of the decline in corporate travel may prove permanent, but if foreign leisure travel recovers, the stock should do well.

Performance

Up to date information on TMPL and its peer group is available on the [QuotedData website](#)

To some extent, RWC's appointment with effect from 1 November 2020 renders an analysis of TMPL's performance prior to that date redundant. However, for completeness, we have included our standard five-year chart in this note. Our initiation note contained some data on the performance of RWC prior to its appointment (see Figure 1 of that note).

Figure 14: Temple Bar NAV relative to MSCI UK and MSCI UK Value (sterling total returns)

Source: Morningstar, Marten & Co

Figure 15: Total return performance over periods ending 31 March 2021

	1 month (%)	3 months (%)	Under RWC's tenure (%)	6 months (%)	1 year (%)	3 years (%)	5 years (%)
TMPL share price	15.4	20.5	65.7	77.4	56.7	6.7	37.8
TMPL NAV	7.9	17.0	54.7	54.4	59.8	4.5	26.6
MSCI UK	4.1	5.2	22.6	16.4	20.0	4.5	28.8
MSCI UK Value	4.9	6.8	29.7	24.4	18.4	(5.0)	23.5

Source: Morningstar, Marten & Co

TMPL was hit hard when investors' concerns about the likely effects of COVID-19 were reaching their fever pitch last spring. A rush to growth and quality and away from value was likely one factor, but the trust even underperformed the MSCI UK Value Index. Nevertheless, as confidence began to recover, things improved for the trust. The portfolio was repositioned over October and the beginning of November 2020 ahead of the good news on vaccines in November. This was the catalyst for a

sharp rotation into value stocks, to TMPL's benefit. The momentum appears to have been sustained into 2021 and TMPL has now made up almost all of the ground it lost in March 2020.

The managers note that there have been some very big share price moves within the portfolio. Royal Mail, which we discussed on page 7, was a notable contributor to TMPL's returns, for example.

Royal Sun Alliance was taken over – Canadian group Intact and Denmark's Tryg made a joint bid at 685p per share, a 49% premium to the share price ahead of the offer. Intact took control of the group's UK and Canadian business and Tryg took the Swedish and Norwegian operations.

Source: Morningstar, Marten & Co

We have compared TMPL to the constituents of the AIC's UK equity income sector. The two funds that vie with TMPL for best-performing fund in recent times are both quite highly geared; in Chelverton UK Dividend's case by a zero dividend preference share and in Merchants Trust's case with debt. By contrast, TMPL is not much geared, suggesting that returns from its underlying portfolio have been sector-leading over the past year.

Figure 17: Snapshot of UK equity income sector as at 21 April 2021

TMPL rank	6/22	12/22	19/22	2/22

Source: Morningstar, Marten & Co

TMPL is a decent size, sufficient in March 2021 for it to re-enter the FTSE250 Index, and this is a factor in its relatively low ongoing charges ratio, which is one of the lowest in the sector. While TMPL's shares are trading close to asset value, the sector contains a number of investment companies that are trading at a premium.

One factor that might hold it back a little, however, is its yield, which is now towards the lower end of the peer group ranking. Strong total returns would perhaps override that, however, as seems to have been the case with both Troy Income & Growth and Finsbury Growth & Income.

Dividend

The effect of COVID-19-related dividend cuts, omissions and postponements, and to a lesser extent a rebalancing of the portfolio following the appointment of the new

Dividend reset

manager, was to reduce TMPL's net revenue per share for 2020 to 12.55p, from 53.12p for 2019.

As we discussed in our initiation note, the board and RWC felt that TMPL's dividend needed to be reset to a more sustainable level. Accordingly, the December and March dividends were set at 8.25p, bringing total dividends for 2020 to 38.5p.

The intention is that this is a base from which the dividend can grow in future years. The managers say that TMPL's revenue for this year is looking better. They felt that it makes sense to sacrifice some income in the current environment to try to achieve higher total returns. This is an approach that the team used in the wake of 2008's financial crisis, and the managers say that it worked out well.

Figure 18: TMPL's recent dividend record for accounting years ending 31 December

Source: Temple Bar Investment Trust

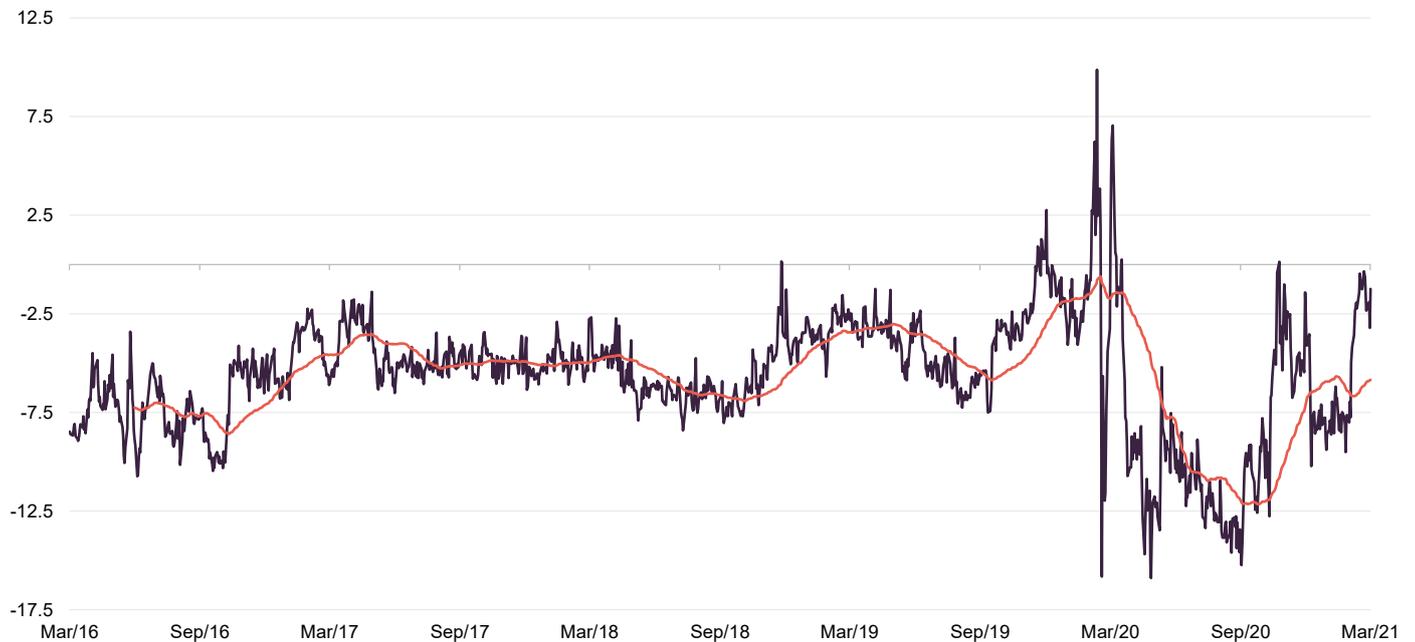

Discount

After a period of COVID-19-related volatility, TMPL's discount appears to be on a narrowing trend

TMPL's discount has been more volatile in recent quarters, perhaps reflecting the turmoil in markets. It narrowed in the wake of November's vaccine announcements, briefly trading at a premium, and the general trend now seems to be positive.

Over the year ended 31 March 2021, TMPL traded between a 15.9% discount and a 7.1% premium, hitting those extremes in the volatility of last Spring. The average discount over that period was 8.2%. At 21 April 2021, TMPL was trading at a discount of 2.2%.
